

Dual traffic protection for grocery distribution centre

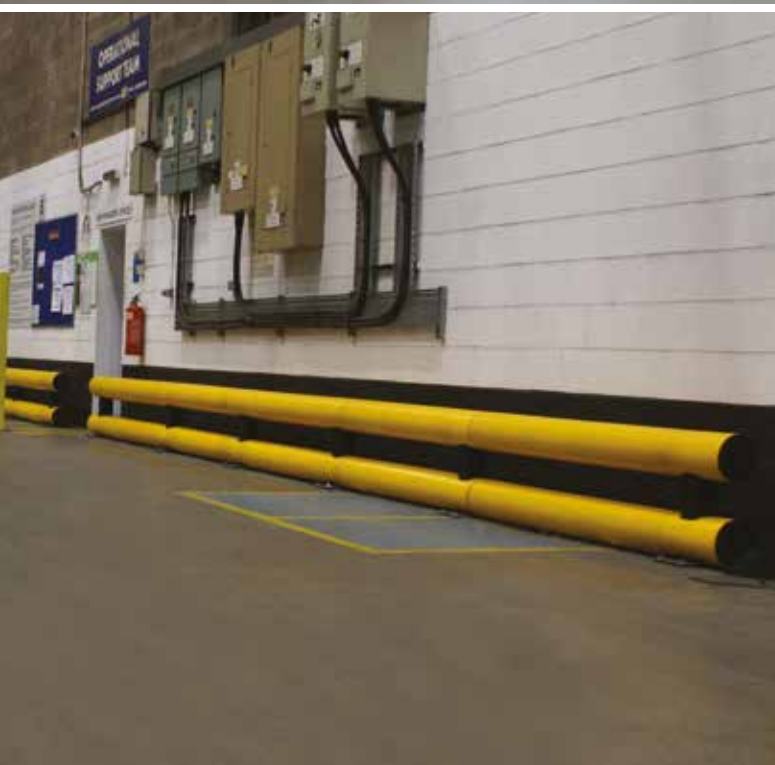

To ensure efficient and safe operations at a retail distribution centre, A-SAFE were invited to recommend and install traffic and pedestrian protection solutions on site.

Warehousing & Distribution

Retail

Customer:

A global American hypermarket, discount department and grocery store chain, with 11,695 stores operating under a total of 63 brands.

Situation:

The customer was looking for a solution that would protect both pedestrians and the facility against vehicle traffic at their North American distribution centre. They wanted to ensure the site was a safe place for both streams of traffic to navigate from one side of the facility to the other.

Solution:

A-SAFE manufactured, supplied and installed iFlex Single Traffic+ Barrier to define and protect pedestrian walkways against heavy workplace vehicles, supported by bespoke ground level barrier to safeguard the building's fabric against repeated damage and the excessive maintenance it causes.

Engineered using Memaplex™, our iFlex barriers are purpose designed to provide industry-leading workplace protection. On impact, iFlex barriers absorb kinetic energy, dissipating it through the barriers to minimise damage to the floor, before flexing back to their original shape.

Products:

- iFlex™ Single Traffic+ Barrier
- Pedestrian 3 Rail Barrier
- Ground Level Barrier
